Date:
June 13th, 2026

User story 001:

Title: Start a run	Priority: High	Estimate: 2 hours
User Story: As a player I want to start a new run In order to begin a fresh gameplay session with reset/new progress		
Acceptance Criteria: • The player can start a new run from the main menu. • All stats and progress are reset. • The new run is initialized correctly. • The map and cards are generated again.		

User story 002:

Title: Explore Rooms	Priority: High	Estimate: 2 hours
User Story: As a player I want to explore new and different rooms In order to discover new cards and have a different experience every run		
Acceptance Criteria: • The player can move between rooms. • Each room has hidden cards. • Cards can be collected once per room. • Rooms can be revisited but have no additional rewards.		

User story 003:

Title: Interior Map Generation	Priority: High	Estimate: 3 hours
User Story: As a game designer I want the interior rooms to be generated randomly In order to make every run feel different, unpredictable and unique		
Acceptance Criteria: • 3 rooms are generated in addition to the main entrance of the house. • The position of the rooms vary every run. • Some rooms are connected. • One of the rooms is randomly assigned as the boss room. • Random and hidden cards are in each room.		

User story 004:

Title: Exterior Map Exploration	Priority: Medium	Estimate: 2 hours
User Story: As a game designer I want the exterior area remains fixed between every run In order to give the players a familiar starting area		
Acceptance Criteria: • The exterior layout is identical every run. • Cards can still be found there. • Cards are hidden randomly around the exterior layout.		

User story 005:

Title: Card Collection Storage	Priority: High	Estimate: 4 hours
User Story: As a developer I want want collected cards to be stored per run In order to use the correct deck during combat		
Acceptance Criteria: • Cards are added to the player's current deck. • Cards can appear multiple times. • Cards are randomly selected every combat. • Cards are stored as the player finds them around the map.		

User story 006:

Title: Entering a Combat	Priority: High	Estimate: 1 hour
User Story: As a developer I want combat to start when the player gets closer to the boss In order to trigger the combat automatically		
Acceptance Criteria: • Combat begins immediately upon getting close to the boss. • Player and enemy are initialized for battle. • The player's deck is randomly selected from the player's stored cards.		

User story 007:

Title: Turn-based Combat	Priority: Medium	Estimate: 3 hours
User Story: As a game designer I want to alternate between player and enemy turns In order to create strategic pacing		
Acceptance Criteria: • Player acts first. • Enemy acts second. • Turns alternate correctly. • Turns can be affected by cards.		

User story 008:

Title: Random Hand Draw	Priority: High	Estimate: 3 hours
User Story: As a player I want to receive a random set of cards each combat In order to adapt my strategy dynamically		
Acceptance Criteria: • A new hand is generated every run. • Cards are selected from the player's current card collection. • Cards can duplicate in a hand. • After using one card a new one is selected randomly to take its place in the hand.		

User story 009:

Title: Energy System	Priority: High	Estimate: 2 hours
User Story: As a game designer I want cards to consume energy when used In order to limit how many actions the player can take during combat and strategies the use of resources		
Acceptance Criteria: • Each card has a fixed energy cost. • The player starts with 100 energy points every combat. • Energy points cannot exceed 150. • Cards cannot be used without enough energy. • Wildcards can be used to trade life for energy during combat.		

User story 010:

Title: Wildcard Mechanic	Priority: Medium	Estimate: 2 hours
User Story: As a game designer I want a card that trades health for energy In order to introduce risk based decision every combat		
Acceptance Criteria: • Using this type of card reduces the player's health points. • The player recovers energy points. • The effect is applied immediately. • Can only be used once per combat. • The player can only have one wildcard per run.		

User story 011:

Title: Stats Tracking	Priority: High	Estimate: 3 hours
User Story: As a data analyst I want the game to track the player's performance every run In order to evaluate the gameplay results		
Acceptance Criteria: • The time duration of every run is recorded. • Cards collected are recorded. • Damage dealt and received is recorded. • Health recovered is recorded.		

User story 012:

Title: End Run Summary	Priority: Medium	Estimate: 2 hours
User Story: As a player I want to see the summary at the end of a run In order to understand my performance		
Acceptance Criteria: • A summary screen is shown after the run ends by either defeating the boss or dying. • All stats are displayed clearly.		

User story 013:

Title: Player's Death	Priority: Medium	Estimate: 3 hours
User Story: As a developer I want the game's run to end when the player is defeated by reaching 0 health during combat In order to maintain valid gameplay states		
Acceptance Criteria: • The run ends immediately when the health points of the player reaches 0. • The player cannot continue the run. • All the player's progress is lost and reset for another run.		

User story 014:

Title: Enemy Attacks	Priority: High	Estimate: 2 hours
User Story: As a developer I want the enemy to execute an attack during its turn In order to correctly apply damage and flow during combat		
Acceptance Criteria: • The enemy only attacks during its designated turn. • The attacks reduce the player's health points based on predefined damage values. • The attack is skipped if the enemy is affected by a control effect. • If the player has an active evasion effect, the attack has no damage. • The system updates the player's health points after the attack. • The turn switches back to the player after the enemy's action.		

User story 015:

Title: Enemy Difficulty Balance	Priority: High	Estimate: 2 hours
User Story: As a data analyst I want to track the outcomes of the player encounter with the enemy In order to evaluate whether the difficulty scaling is balanced		
Acceptance Criteria: • Record whether each encounter ends in victory or defeat. • The system tracks how many attempts are needed to defeat the boss. • Record the player's remaining health after each combat. • Comparison between different runs.		

User story 016:

Title: Combat UI Feedback	Priority: High	Estimate: 2 hours
User Story: As a UI designer I want the combat interface to clearly display the player and enemy status In order to help the player to make informed decisions		
Acceptance Criteria: • Player health is always visible. • Enemy health is always visible. • Player energy is clearly displayed. • The current hand of cards is visible and readable. • The energy cost of every card is displayed.		

User story 017:

Title: Card Pickup Visual Feedback	Priority: Medium	Estimate: 1 hour
User Story: As a UI designer I want the process of acquiring cards to have a clear visual and interactive feedback In order to make the action of finding a card more rewarding and simple to understand		
Acceptance Criteria: • Each acquired card shows its name, type and effect in a readable format. • After collection, the UI updates to reflect the new cards of the collection. • A confirmation indicates the card was added to the player's collection.		

User story 018:

Title: Immersive Art Style	Priority: Medium	Estimate: 1 hour
User Story: As a player I want the game to have a consistent and attractive art style In order to feel immersed and connected to the character and the environment		
Acceptance Criteria: • Cards have a clear visual based on their type. • Sound effects match the tone of the game. • The color palette is consistent, attractive and non distracting. • The character's design is consistent across gameplay elements. • The exterior and interior environments follow a visual theme.		

User story 019:

Title: Combat Balance	Priority: High	Estimate: 2 hours
User Story: As a game designer I want the cards and energy costs to be balanced In order to ensure fair and strategic gameplay		
Acceptance Criteria: • Stronger cards consume more energy than weaker ones. • Low cost cards provide weaker or smaller effects. • The player cannot win consistently by using only one type of card. • The energy system enforces decision making. • All card types have a meaningful use.		

User story 020:

Title: Sound Effects for Actions	Priority: Medium	Estimate: 1 hour
User Story: As a sound designer I want key gameplay actions to have a unique and distinct sound effect In order to ensure player feedback and immersion to the game		
Acceptance Criteria: • Playing and using a card triggers a unique sound effect. • Collecting a card plays a rewarding sound. • Enemy attacks have a unique audio. • Different card types have a slightly different sound effect. • Sounds are not overwhelming.		

User story 21:

Title: Attack Cards	Priority: High	Estimate: 2 hours
User Story: As a game designer I want attack cards to deal varying amounts of damage based on their energy costs In order to provide meaningful offensive choices during combat		
Acceptance Criteria: • Attack cards deal damage within defined numerical ranges. • Players must choose between multiple attack options rather than relying on one. • The energy costs vary depending on the amount of damage the card can deal to the enemy.		

User story 22:

Title: Defensive Cards	Priority: High	Estimate: 2 hours
User Story: As a game designer I want defensive cards to provide and offer healing and protection options In order to allow players to survive longer during combat and recover from damage		
Acceptance Criteria: • Some cards restore player health points. • Some cards prevent or avoid incoming damage from enemy attacks. • Healing values are balanced against enemy damage output. • Players must decide when to heal versus when to attack.		

User story 23:

Title: Control Cards	Priority: High	Estimate: 2 hours
User Story: As a game designer I want control cards to influence the enemy behavior In order to add strategic depth and turn management		
Acceptance Criteria: • Control cards can skip enemy turns. • Different cards apply different control levels (1 turn or 2 turns). • Control effects are temporary and defined. • Control cards have higher energy costs than other cards. • Players must decide when it is worth delaying the enemy attacks instead of doing other actions.		

User story 24:

Title: Card Description Clarity	Priority: Medium	Estimate: 2 hours
User Story: As a UI designer I want card descriptions to be clear and easy to read for the players In order to help players understand their effects quickly		
Acceptance Criteria: • Text is easy to read and short. • Important effects or values highlighted. • Card type is clearly indicated.		

User story 25:

Title: Player Movement Feedback	Priority: Medium	Estimate: 1 hour
User Story: As a player I want visual feedback when moving between rooms In order to understand my current position and where to go		
Acceptance Criteria: • Movement is animated or indicated. • Location is always visible. • The movement of the character is consistent with the controls.		

User story 26:

Title: Combat Result Feedback	Priority: Medium	Estimate: 1 hour
User Story: As a player I want clear feedback of when the combat ends and the result In order to understand the final outcome		
Acceptance Criteria: • The victory or defeat result is clearly shown. • Smooth transition.		

User story 27:

Title: Intuitive Controls	Priority: Medium	Estimate: 1 hour
User Story: As a player I want simple and intuitive controls In order to move, explore and interact with the game easier		
Acceptance Criteria: • The player can select and play cards easily during combat encounters. • Inputs respond immediately without a noticeable delay. • Basic introductions are available for new players. • Controls are consistent.		

User story 28:

Title: Minimal UI Clutter	Priority: Medium	Estimate: 2 hours
User Story: As a UI designer I want the interface of the game to remain clean and simple In order to avoid overwhelming the player with too many options and elements		
Acceptance Criteria: • Only essential elements are shown. • The game's screens are not overcrowded by elements. • The interface feels smooth and consistent.		

User story 29:

Title: Dynamic Background Music Design	Priority: Medium	Estimate: 1 hour
User Story: As a sound designer I want background music that matches the different stages and environments of the game In order to enhance the immersion and emotional tone of the game		
Acceptance Criteria: • Main screens and exploration areas have a calm or ambient music. • Combat has more intense and fast pacing music. • Music changes appropriately and smoothly when entering combat. • Transitions are smooth. • The music tracks are in a constant loop.		

User story 30:

Title: Run Time Awareness	Priority: Low	Estimate: 3 hours
User Story: As a player I want to know how long my runs lasted In order to manage my time and performance		
Acceptance Criteria: • Time starts running once the run has started. • Time is displaced during and after the run. • Time is shown as part of the stats of the player.		

User story 31:

Title: Run Comparison	Priority: Medium	Estimate: 3 hours
User Story: As a data analyst I want to compare different runs In order to identify patterns and the player performance		
Acceptance Criteria: • Runs can be compared by stats. • Differences are noticeable. • The stats data is well summarized.		

User story 32:

Title: Health Bar	Priority: Medium	Estimate: 1 hour
User Story: As a game designer I want the player health to have a fixed maximum amount In order to maintain balance in healing and combat mechanics		
Acceptance Criteria: • Player health cannot exceed 100. • The enemy health varies depending on the difficulty and is predefined by a numerical range. • Healing stops at maximum value. • If the health reaches 0 from either the player or enemy the combat ends.		

User story 33:

Title: Boss Room Discovery	Priority: High	Estimate: 2 hours
User Story: As a player I want to explore the interior area to discover which room contains the enemy In order to plan my exploration and discovery of new rooms		
Acceptance Criteria: • The boss room is hidden. • It is revealed when entering. • It generates in a random room every run and level.		

User story 34:

Title: Combat UI Design	Priority: High	Estimate: 2 hours
User Story: As a UI designer I want the combat interface to be well structured and consistent In order to help the player to quickly understand the available options and actions		
Acceptance Criteria: • Player Health and energy is visible. • Enemy health is visible. • Cards at hand are displayed in an organized layout. • Important elements are prioritized. • The interface is not cluttered with elements.		

User story 35:

Title: First Time User	Priority: High	Estimate: 1 hour
User Story: As a player I want the game to guide me the first time I play In order to comprehend the main mechanics of the game		
Acceptance Criteria: • The first run includes guidance. • Introductions include the controls for movement. • Introductions explain the usage of cards and their effects. • Explain the health and energy bars. • Explain how combats are played.		

User story 36:

Title: Pixel Art Visual Identity	Priority: High	Estimate: 3 hours
User Story: As a UI designer I want all visual elements of the game to follow consistent pixel art style In order to create a cohesive and appealing in game experience		
Acceptance Criteria: • All assets like characters, cards, map and environment are pixel art. • The resolution is consistent across all elements. • Animations respect the pixel art style of the game. • UI elements like buttons and text align with the pixel art aesthetic. • Not a single visual element breaks the style and art consistency.		

User story 37:

Title: Core Gameplay Loop	Priority: High	Estimate: 6 hours
User Story: As a game designer I want the core gameplay loop to be clear and engaging In order to ensure the player understands and enjoys the main flow of the game		
Acceptance Criteria: • The loop of the game follows a clear structure. • Encourages new runs. • Each stage of the loop has a defined purpose or role.		

User story 38:

Title: Data Structure for Game	Priority: High	Estimate: 3 hours
User Story: As a data analyst I want the game data to be organized in a structured way In order to easily analyze the game stats and performance		
Acceptance Criteria: • Data from each run is stored in a consistent format. • Key metrics are clearly defined and assigned. • No data is lost or incomplete. • The structure avoids redundancy. • Relations between elements are consistent. • The system allows for the retrieval of information for gameplay and analysis.		

User story 39:

Title: Database connection	Priority: High	Estimate: 5 hours
User Story: As a data analyst I want the game data to be organized and stored in a structured database In order to track player performance, analyze gameplay statistics, and identify patterns across different runs.		
Acceptance Criteria: • Data from each run is stored in a consistent format. • Key metrics such as damage dealt, damage taken, cards collected, HP recovered, combat results, and completion time are clearly defined and assigned. • No gameplay data is lost or stored incompletely. • The database structure avoids unnecessary redundancy. • Relationships between runs, combats, cards and player statistics are consistent.		

- Stored data supports comparison between multiple runs.
- The database structure is documented and aligned with the game's ER diagram.

User story 40:

Title: Game Screens	Priority: High	Estimate: 4 hours
User Story: As a game designer I want the game to include clear and functional screens for each stage of gameplay In order to provide a smooth and intuitive experience for the player.		
Acceptance Criteria: • The game includes a Main Menu screen that allows the player to start the game and access other options. • The game includes a Pause Menu that can be accessed during gameplay. • The game includes a Game Over screen that is displayed when the player loses all health. • The game includes a Credits screen that displays the project contributors. • Players can navigate between screens using the appropriate controls. • Each screen displays only the information relevant to its purpose. • The visual style of all screens is consistent with the rest of the game. • Screen transitions occur correctly without causing gameplay issues. • The player can return to the Main Menu from the Credits and Game Over screens.		

User story 41:

Title: Web	Priority: High	Estimate: 4 hours
User Story: As a web developer I want to create a website that integrates account management, game access, tutorials, and player statistics In order to provide a centralized platform for users to interact with the game and its features.		
Acceptance Criteria: • The website includes a Register page for new users. • The website includes a Log In page for existing users. • The website includes a Log Out functionality. • The website includes a Tutorial section explaining the game mechanics. • The website includes a Statistics page displaying player performance data. • The website includes a Play Game option that launches the game. • The website maintains a consistent layout and design across all pages.		

User story 42:

Title:API Integration	Priority: High	Estimate: 7 hours
User Story: As a data analyst I want the API to provide access to player statistics, run data, and card usage information in order to analyze gameplay patterns and player performance.		
Acceptance Criteria: • The API provides access to player statistics, run data, and card information. • Data can be filtered and retrieved in a consistent format. • Relationships between runs, cards, combats, and statistics are maintained. • Retrieved data is complete, accurate, and free of duplicates. • The API provides the necessary information for gameplay analysis and reporting.
